CLOUD EMAIL ARCHIVING
Keep corporate email archived, accessible, manageable, and compliant

Cloud Email Archiving

ARCHIVED > ACCESIBLE > MANAGEABLE > COMPLIANT

Maintaining email archives for meeting legal retention, discovery, and compliance requirements becomes more difficult every year. By 2021, the total number of business and consumer emails sent and received each day is expected to reach almost 320 billion . The amount of sensitive information sent through email is accelerating as is the number of damaging data loss events. With growing volumes of confidential emails, email hacks, and changing compliance requirements, such as the new EU General Data Protection Regulation (GDPR), email archiving capabilities must keep pace.

Spamina Cloud Email Archiving is an enterprise-scale, cloud-delivered solution that gives you a powerful tool for email retention, legal discovery, and search. We capture all incoming and outgoing email at the network edge, before there is a risk of email being lost or altered. Our "cloud-to-ground" architecture delivers archiving at scale with consistent high performance. A single platform for your complete archive—Spamina elevates email archiving power and manageability.

KEY BENEFITS

Maximize data integrity

- Capture all email at network edge to prevent potential deletion or tampering
- Maintain data immutability for an unlimited time period
- Place legal holds on mailboxes without disrupting operations or generating unnecessary alerts

Increase agility

- Gain anytime, anywhere access with cloud delivery
- Maintain a single, consistent archive for all incoming and outgoing email messages
- Increase archive capacity on demand
- Change retention and archiving policies as needed while retaining legacy emails

Accelerate legal discovery and simplify compliance

- Perform complex, detailed searches in seconds
- Expand instant search and recovery across the entire email archive
- Save time with built-in support for audit and compliance activities

Enhance staff productivity

- Simplify management with a single, web-based console
- Place archived emails, audit logs, and end users' email at staff fingertips
- Access archive from web, Outlook, or mobile device interfaces
- Automatically record and audit log-ins, searches, data views, and exports

At the Email Gateway
We copy, index, and time-stamp email at the gateway—before incoming mail is forwarded to mailboxes and before outgoing mail is sent to the Internet for delivery. An edge-centered architecture helps ensure that messages cannot be lost or altered between arriving in a user's mailbox and being archived.

From Cloud to Ground
Both system administrators and users can search for archived emails from Outlook, the web, or their mobile devices. Fast, anywhere-anytime search accelerates discovery without having to involve your IT staff.

Made in Europe
We understand European customers' geographic data requirements. Our data centers operate in areas where your data privacy is legally protected from third parties.

GAIN RELIABLE RETENTION

Retain and manage a single, consistent archive for all of your organization's email messages—no matter the volume and time period. Unlike email archiving solutions that rely on employees to decide which emails to archive and which to delete, we capture all email at the network edge and ensure that retention policies are enforced.

Spamina also provides bottomless email storage. You never have to worry about running out of server space, limited retention periods, or adding costly infrastructure. Our always-on cloud archive offers high resiliency and nonstop availability.

ENABLE TRANSPARENT LEGAL HOLD

Users should not be alerted if their mailbox is placed on legal hold. Other archiving solutions notify users, which can disrupt work, cause alarm, and jeopardize the legal discovery process. Spamina Cloud Email Archiving resides on a completely separate infrastructure from your email system, enabling you to quickly and transparently place legal holds on email boxes for secure discovery.

ACHIEVE HIGH-PERFORMANCE SEARCH

We provide near-real-time search capabilities across your entire email archive. An advanced search engine enables you to perform complex detailed searches in seconds. Rapid retrieval helps accelerate legal discovery. Spamina also indexes attachment content and exports email to most standard formats.

SUPPORT COMPLIANCE INITIATIVES

The Spamina Cloud Email Archiving solution meets critical data governance requirements for availability, security, usability, and data integrity. Granular, role-based access and controls ensure that only authorized users can access, search, and manage archives. Auditors also have clear visibility into search activity. Email archives support your audit and compliance activities for a wide range of regulatory acts, including EU GDPR, PCI DSS, HIPAA, FINRA, PIPED, and other region-specific regulations.

MANAGE ARCHIVES EASILY FROM ANYWHERE

Our unified console enables you to easily manage all of your organizations' domains, generate audit reports, and instantly drill down to information per user. You can change policies and the mailboxes archived at any time. Even when mailboxes are no longer archived, or if requirements change, Spamina retains all legacy archives and policies with full data integrity. Employees can quickly and easily search their email archives to recover old or deleted emails. You and your users can access the archive from the Spamina website, Spamina mobile application, or Outlook.

GAIN IN-DEPTH REPORTING

Generate reports for the organization overall or by specific user. User traffic reports include information such as total number of emails sent and received, volume by kilobytes, ranking of senders and destinations based on the number of messages exchanged, and other metrics. Perform reporting on the fly or automate daily and weekly reporting.

EFFECTIVELY CONTROL ARCHIVING COSTS

Our highly resilient and massively scalable cloud infrastructure gives you control over archiving costs. Cloud delivery eliminates the costs of data center hardware acquisition, management, and upgrades. No matter how large the archive grows or how complex the searches become, you have the capacity and predictability needed.
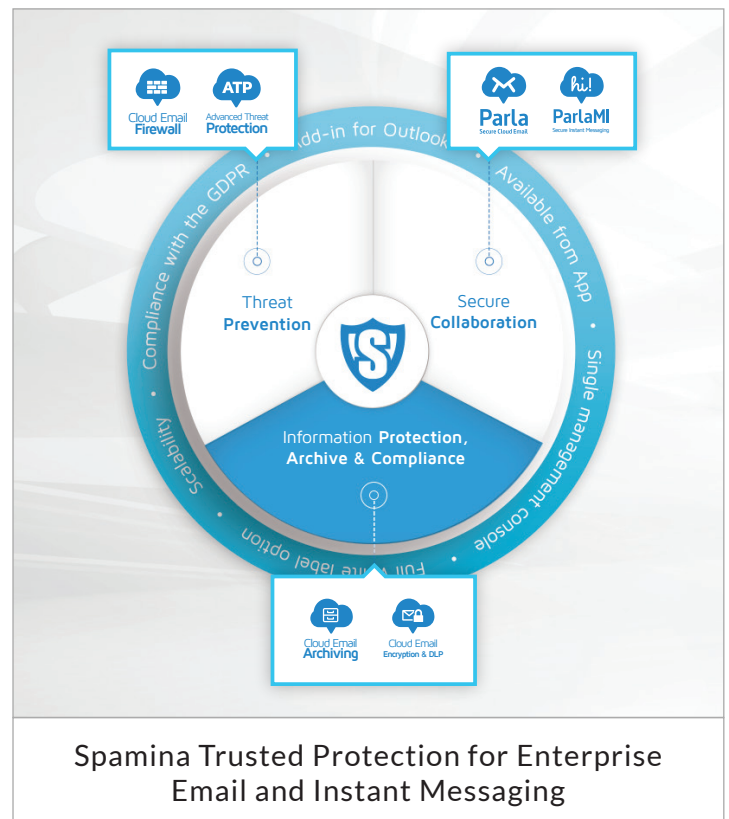

EXTEND THE BENEFITS

Spamina Cloud Email Archiving complements all leading email systems, including Microsoft Exchange, Microsoft Exchange Online/Office 365, Lotus Domino and our secure collaboration solution Parla. You can further extend email protection with Spamina Cloud Email Firewall, Advanced Threat Protection, and Cloud Email Encryption & DLP to integrate email protection, data loss prevention, and archiving in a single console.
