

TRILLION

Keep your infrastructure protected with Trillion™

Trillion™ is a breached credential mining platform that continuously tracks, correlates and analyses billions of stolen usernames and passwords, hunting for digital identities that could belong to your staff.

Trillion™ is a natural extension to your existing security stack

How valuable is visibility on employee usernames and passwords being shared by criminals to you? Where have they got them from? What they were?

In a world where businesses need to be 100% secure at all times to prevent attacks, staying ahead of threats has never been more vital.

Trillion™ can give you that edge by providing unique cyber security capabilities that provide instant value to you by protecting your business from the real and growing danger of leaked credentials.

Trillion™ has been designed for today's business

Massive scale

Trillion™ constantly monitors the billions of account credentials passing through dark markets and criminal forums, looking for the few hidden accounts that might affect your business

Crowd co-operation

Trillion™ lets employees play their part in securing your customers by letting them help determine the validity of their own leaked information, and the potential impact it might have on your IT services

Intelligent analysis

Trillion™ does a lot more than just locate stolen credentials. Our intelligent risk engines identify which leaked usernames and passwords have the greatest potential to result in corporate damage

See what matters

Without the right tools, monitoring breach data can be exhausting. That's why Trillion™ makes it easy to sort through it, by providing data filters and automatic live account detection

Secure by design

The management of business threats is perfectly balanced with the protection of user privacy because security is at the heart of what we do. That makes us trusted by some of the world's biggest brands.

Features at a glance
